

Test Report for Login & Sign-up Functionality

Overview of the Feature Tested:

The feature tested includes the Login and Sign-up functionality on the Myntra platform. The testing focused on ensuring that users can access and interact with the Login/Sign-up page, validate mobile number inputs, handle OTP functionality, and navigate through different links related to login and security processes.

Summary of Test Execution:

- Total Test Cases Executed: 33
- Test Cases Passed: 33
- Test Cases Failed: 0

All test cases were executed successfully with a 100% pass rate, indicating that the Login & Sign-up functionality is functioning as expected under the defined test scenarios.

Detailed Description of Defects Found:

No defects were found during this testing cycle. All test cases passed successfully, confirming the robustness of the Login & Sign-up functionality under the tested conditions.

Conclusion:

The Login & Sign-up functionality on the Myntra platform has been thoroughly tested with all scenarios passing successfully. The system demonstrated strong performance in areas such as mobile number verification, OTP handling, and secure login practices, with no defects found.

This test report confirms that the feature is ready for deployment, with a recommendation to conduct further testing under varied network conditions and device responsiveness to ensure comprehensive coverage.
